

CareOps

From complex data to actionable decisions.

Evidence-backed AI decision support that turns complex member data into clear, actionable decisions for health plans and care teams.

The chronic care challenge

INDUSTRY CONTEXT

~90%

of the \$4.1–4.5T spent yearly on U.S. healthcare goes to chronic disease. (CDC)

1.5–2x

higher CMS capitated payments for C-SNP members than for the average member.

2x+

growth in C-SNP enrollment in recent years. (L.E.K.)

WHERE TEAMS STRUGGLE TODAY

Clinical gap

High-risk members miss appointments, so deterioration is caught late and avoidable ER visits increase.

Plan optimization

Incomplete documentation of illness burden leads to inaccurate risk-adjustment payments.

Care navigation

Navigators sort through spreadsheets to find members who may qualify for a C-SNP and to support an SEP.

How CareOps works

Smart routing

A supervisor for a holistic view, or a specialist for a focused review.

Evidence-backed findings

Every finding comes from approved policy and carries an Evidence ID.

Safety guardrail

Output must trace back to evidence before it is handed off.

What CareOps produces

ASSESSMENT RESULT

● CRITICAL PRIORITY

● Validated

● Overall Member Assessment

● Saved result (no new run)

Aarav Sharma presents with uncontrolled Type 2 Diabetes, evidenced by poor glycemic control (HbA1c 9.9%) and abnormal blood pressure (174 mmHg systolic). A significant care continuity gap of over 251 days for follow-up care is also identified. This situation warrants immediate clinical attention and navigation support.

Member Aarav Sharma (P0001) Agent CareOps Supervisor Completed 02 Oct 2026, 05:08 UTC Duration 29.3 s

Why it matters

Uncontrolled Type 2 Diabetes with elevated HbA1c and high blood pressure significantly increases the risk of serious complications such as cardiovascular disease, kidney damage, and nerve damage. The prolonged gap in follow-up care exacerbates these risks by delaying necessary interventions and monitoring, highlighting a critical need for coordinated care.

Findings

Only findings that crossed a configured threshold are listed.

CLN-001	HbA1c above threshold Poor glycemic control	9.9 %
CLN-002	Abnormal vital sign One or more vital signs are outside their configured limits.	Systolic BP 174 mmHg
GAP-001	Overdue follow-up The configured continuity interval has been exceeded.	251 days

Matched evidence patterns

Configured combinations that shaped the recommendation.

PATTERN	Clinical concern with continuity gap Clinical concern is paired with a meaningful continuity gap.	Care-team follow-up
PATTERN	Chronic-condition navigation context A configured chronic-condition context is present and may warrant navigation review.	Navigation review

Recommended next step

NEXT STEP
Initiate care-team follow-up to address the clinical concerns and continuity gap, alongside a navigation review for chronic condition management.

Actions

- 1 Review the active clinical findings and arrange appropriate follow-up.
Clinical concern is paired with a meaningful continuity gap.
Care Team CLN-001 CLN-002 GAP-001
- 2 Support appointment access when a continuity barrier is identified.
Clinical concern is paired with a meaningful continuity gap.
Care Navigator GAP-001
- 3 Review the navigation pathway and verify applicable member context.
A configured chronic-condition context is present and may warrant navigation review.
Care Navigator

STAKEHOLDER VIEWS · SAME DECISION, EACH AUDIENCE

Member

Personalized follow-up

Your recent health data shows high blood sugar and blood pressure, and it's been a while since your last follow-up. Your care team will reach out to help you get back on track with your Type 2 Diabetes management.

Care Team

Review and act

Aarav Sharma (P0001) has uncontrolled Type 2 Diabetes (HbA1c 9.9%, BP 174 mmHg) and an overdue follow-up (251 days). Please review clinical findings and arrange follow-up.

Navigator

Access and navigation

Aarav Sharma (P0001) has uncontrolled Type 2 Diabetes and a significant care gap. Support appointment access and review navigation pathway for chronic condition management.

Health Plan

Status and oversight

Member P0001, Aarav Sharma, has uncontrolled Type 2 Diabetes with clinical concerns (HbA1c 9.9%, BP 174 mmHg) and a 251-day care continuity gap. Care team and navigation follow-up initiated.

How teams use the output

OUTPUT

BUSINESS USE

Priority and summary

Order the outreach queue so the most urgent members are reviewed first.

Findings and Evidence IDs

Explain why a member was flagged and keep an auditable record for compliance and risk-adjustment documentation.

Clinical thresholds

Give navigators the clinical data (for example, HbA1c) to review C-SNP eligibility and support an SEP.

Recommended actions

Direct each follow-up to the right team: care team, navigator or health plan.

Audience views and API

Share consistent messaging with members and teams, and feed existing workflows through the API.

Thank you

CareOps · From complex data to
actionable decisions.
